Art Unit 1209

Claims 1-5 are pending in this application.

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 1-5 are rejected under 35 U.S.C. § 103 as being unpatentable over Cosby.

Cosby teaches that strong acid salts of ammonia such as ammonium sulfate has insecticidal effect (column 1, line 46 to column 2, line 31).

While Cosby does not expressly disclose the method of arriving at ammonium sulfate by combining 98% pure sulfuric acid with ammonium sulfate under 15 psi as specifically recited in instant claims, one having ordinary skill in the art would have readily recognized the importance of keeping ammonium sulfate under acidic condition and would thus have utilized strong acids such as sulfuric acid to achieve acidic condition. Specifics of

proportions and reaction conditions are held to be within the skill of the ordinary skilled artisan who is a trained chemist who would have been able to adjust reaction parameters for desired concentration and reaction kinetics.

Thus, the claimed invention, as a should, would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made, because every element of the invention has been fairly suggested by Cosby.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Pak, whose telephone number is (703) - 308-4538. The examiner can normally be reached on Mondays to Thursdays and on alternate Fridays, from 8:00 a.m. to 5:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Dees, can be reached on (703) - 308-4628. The fax phone number for this Group is (703) - 308-4556.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703)-308-1235.
